

Soft Proofing Set Up and Role Out for 2012

What needs to be done

1) Setting up of Organization

- a) Set up MAIN Organization. This is the main entity which all other categories fall under,
- b) Set up CUSTOMERS. All Sales Reps become individual customers in the ES System. CUSTOMERS/Sale Reps will be set up by market codes.

Example Customer: MI-Barnwell_Kim

MI-Blitz_Andy

MI-Browe_Pat

**There are ruffly 60 customers that will have to be set up, not including outside SOCT Customers/SalesReps.*

2) Set up PROJECTS for each CUSTOMER (Projects = Products)

Each CUSTOMER/Sales Rep will have a list of PROJECTS/Products assigned to them. CUSTOMERS/Sales Reps will only be able to see the PROJECTS/Products that they sell.

PROJECT/Product Examples:

- 1) Save_On_Everything-MI
- 2) Save_On_Everything-IL
- 3) Save_On Everything-MN
- 4) Save_On_Everything-DAL Cards
- 5) Red_Plum_Inserts/DALs
- 6) SOCT-MI
- 7) SOCT-MN
- 8) SOCT-UT 9) MOBIBO

3) Set up of User Groups and Group Roles

Groups and Group roles are used to define what each person who is using the ES system role is and what level of usability that person has with in the ES System. We can have unlimited User Groups but all User Groups will fall under one of three roles. Gate Keeper, Approver or Reviewer.

Example of Groups and roles:

Admin - Gate Keeper

Production Manager - Gate Keeper (Limited)

Art Coordinator - Gate Keeper (Limited)

Proof Reader - Approver

Designer - Reviewer

MI-CSR - Approver

IL-CSR - Approver

MN CSR- Approver

SOCT-CSR - Approver

City Admin - Gate Keeper (limited)

Sale Rep - Approver

Client - Reviewer

Example of CUSTOMER Project with GROUPS attached

Customer: MI_Barnwell_Kim

Project: Save_On_Everything-MI

Groups: Proof Reader - Bill G., Barb F. (Approvers)

Designer - All Production Designers (Reviewers)

MI-CSRs - Kathy M., Emily B. (Approvers)

Sale Rep - Kim B. (Approver)

There will be a dual approval system for all ads/products. A PROOF READER will have to Approve an ad before a CSR and or SALE Rep can view the ad. The CSR and or SALE REP will be the second APPROVER for the ad.

4) USER set up

This is where the actual user profiles are set up. Users can be attached to Organizations, Customers, Projects and or Groups. Users can be individuals (Sales Reps) or part of a Group (Proof Reader, CSRs). Each user will have there own log-in and password to enter the ES system. Once logged in they will only be able to view and or interact with the part of the ES system that has been assigned to them.

Example: If Kathy M. signs into the ES System she will only be able to see Michigan Customers since she is assigned the MI-CSR Role. If a Sale Rep logs into the ES System they will only be able to view the PROJECTS/Products that are assigned under there CUSTOMER. Kim B. would only see ads for SAVE On Everything, Red Plum Inserts/DALs and SAVE On Everything DALs. Where as Bill D. logs in he would see under his CUSTOMER only his PROJECTS/ Products. SAVE ON Everything, Red Plum Inserts/DALs, SAVE On Everything DALs, MI-SOCT.

**There are ruffly 100 user accounts and roles that need to be set up and assigned inside the ES System*

5) Workflow Set up

Workflows are attached to PROJECT/Product templates and are what make the Soft Proofing Approval/Rejections system work. This is where you assign who can approve and ad and after approval of ads where they go.

Each work flow has two part.

- 1) Project Workflow
- 2) Document WorkFlow

PROJECT WORKFLOWS - are how the approval cycles are set up. What groups or individuals need to approve/reject a document and at what time in the cycle they need to approve/reject a document.

DOCUMENT WORKFLOWS - tell the document what to do and where to go after they have been approved or rejected.

Example: Save On Everything Project Workflow would have a Proof Reader, Designer, CSR, Sales rep assigned to it. the Proof Reader would have to approve the document before a Sale Rep or CSR can view the Document. Once available a CSR and or a Sale Rep would have to approve the document a second time. Once the document is approved it is moved to a specific location on the production servers, based on market and product, and is no longer available for the Sales Rep and or CSR to view.

Example: Ad 1234-0112MI is approved in the ES System. The DOCUMENT Workflow would then move the approved file to the January 2012 Michigan Batched folder on the server and is now ready for Book Building. If rejected it would move to a rejected folder and the approval cycle would start over once a revised ad had been uploaded to the ES system.

6) MetaData

With the installation of the new ES Server and the up grade to our TWIST workflow server that was part of our ES purchase, we now have the ability to utilize MetaData with in our PDF files.

This will allow us to enter information in an InDesign template, create a press ready PDF through our TWIST server and view the MetaData in the Dialogue mark up window on the ES Server. This is through a web browser only. The iPad app does not have the ability to view or show metadata.

There are several hurdles to get through to get this to flow and work properly, but it can be done! This will allow us to enter all current ad label information into a custom Electronic MetaData panel with in a InDesign template (Designers will do this when they create an ad). The Electronic Ad Label (EAL) will carry this information from creation to approval, to bookbuilding and to the web. The original ads built in indesign will also retain this information and be

able to be reused month over month with out having to re-input the information.

Example of information captured:

- 1) Market
- 2) Publication/Product
- 3) Customer Name
- 4) Current Ad Number
- 5) Current Issue Month
- 6) Sale Rep
- 7) Zones Running
- 8) Ad Code/Ad Size
- 9) Late Date Worked ON
- 10) Website Keyword

All of this information will also show up in the Soft Proofing system. This will let us use only one proof and can move away from a first proof/final proof system and use only one file from start to finish.

7) Mile Stones and Email Notification

One of the features in the ES System is email notifications. There are several different kinds of email that can be triggered when certain mile stones have been met.

Example: a new ad has been uploaded to the ES System. An ad has been approved or rejected. Email notifications can be sent out if ads have not been viewed with in 48hrs of upload. Reminders can be sent to sales reps once the 48 hr deadline has passed. Plus what ever notifications we choose to set.

8) Beta Testing of Soft Proofing System

Once all of the above is in place we can begin to beta test the system on a large scale.

Beta testing will allow us to refine our procedures and fill in any gaps we may have missed with our original set up before we go LIVE with the system.

9) Training

After we have finished the beta testing of the ES System we can begin training. Training will consist of several different phases. We will start training by groups (user roles within the system) Because everyone who uses the system will have different roles and levels of accessibility the best way to train will be by user groups.

Example:

Admin/gate Keeper - Over all use of the whole system

Proof Readers - uploading of files in to the ES system. Approving and or rejecting of files

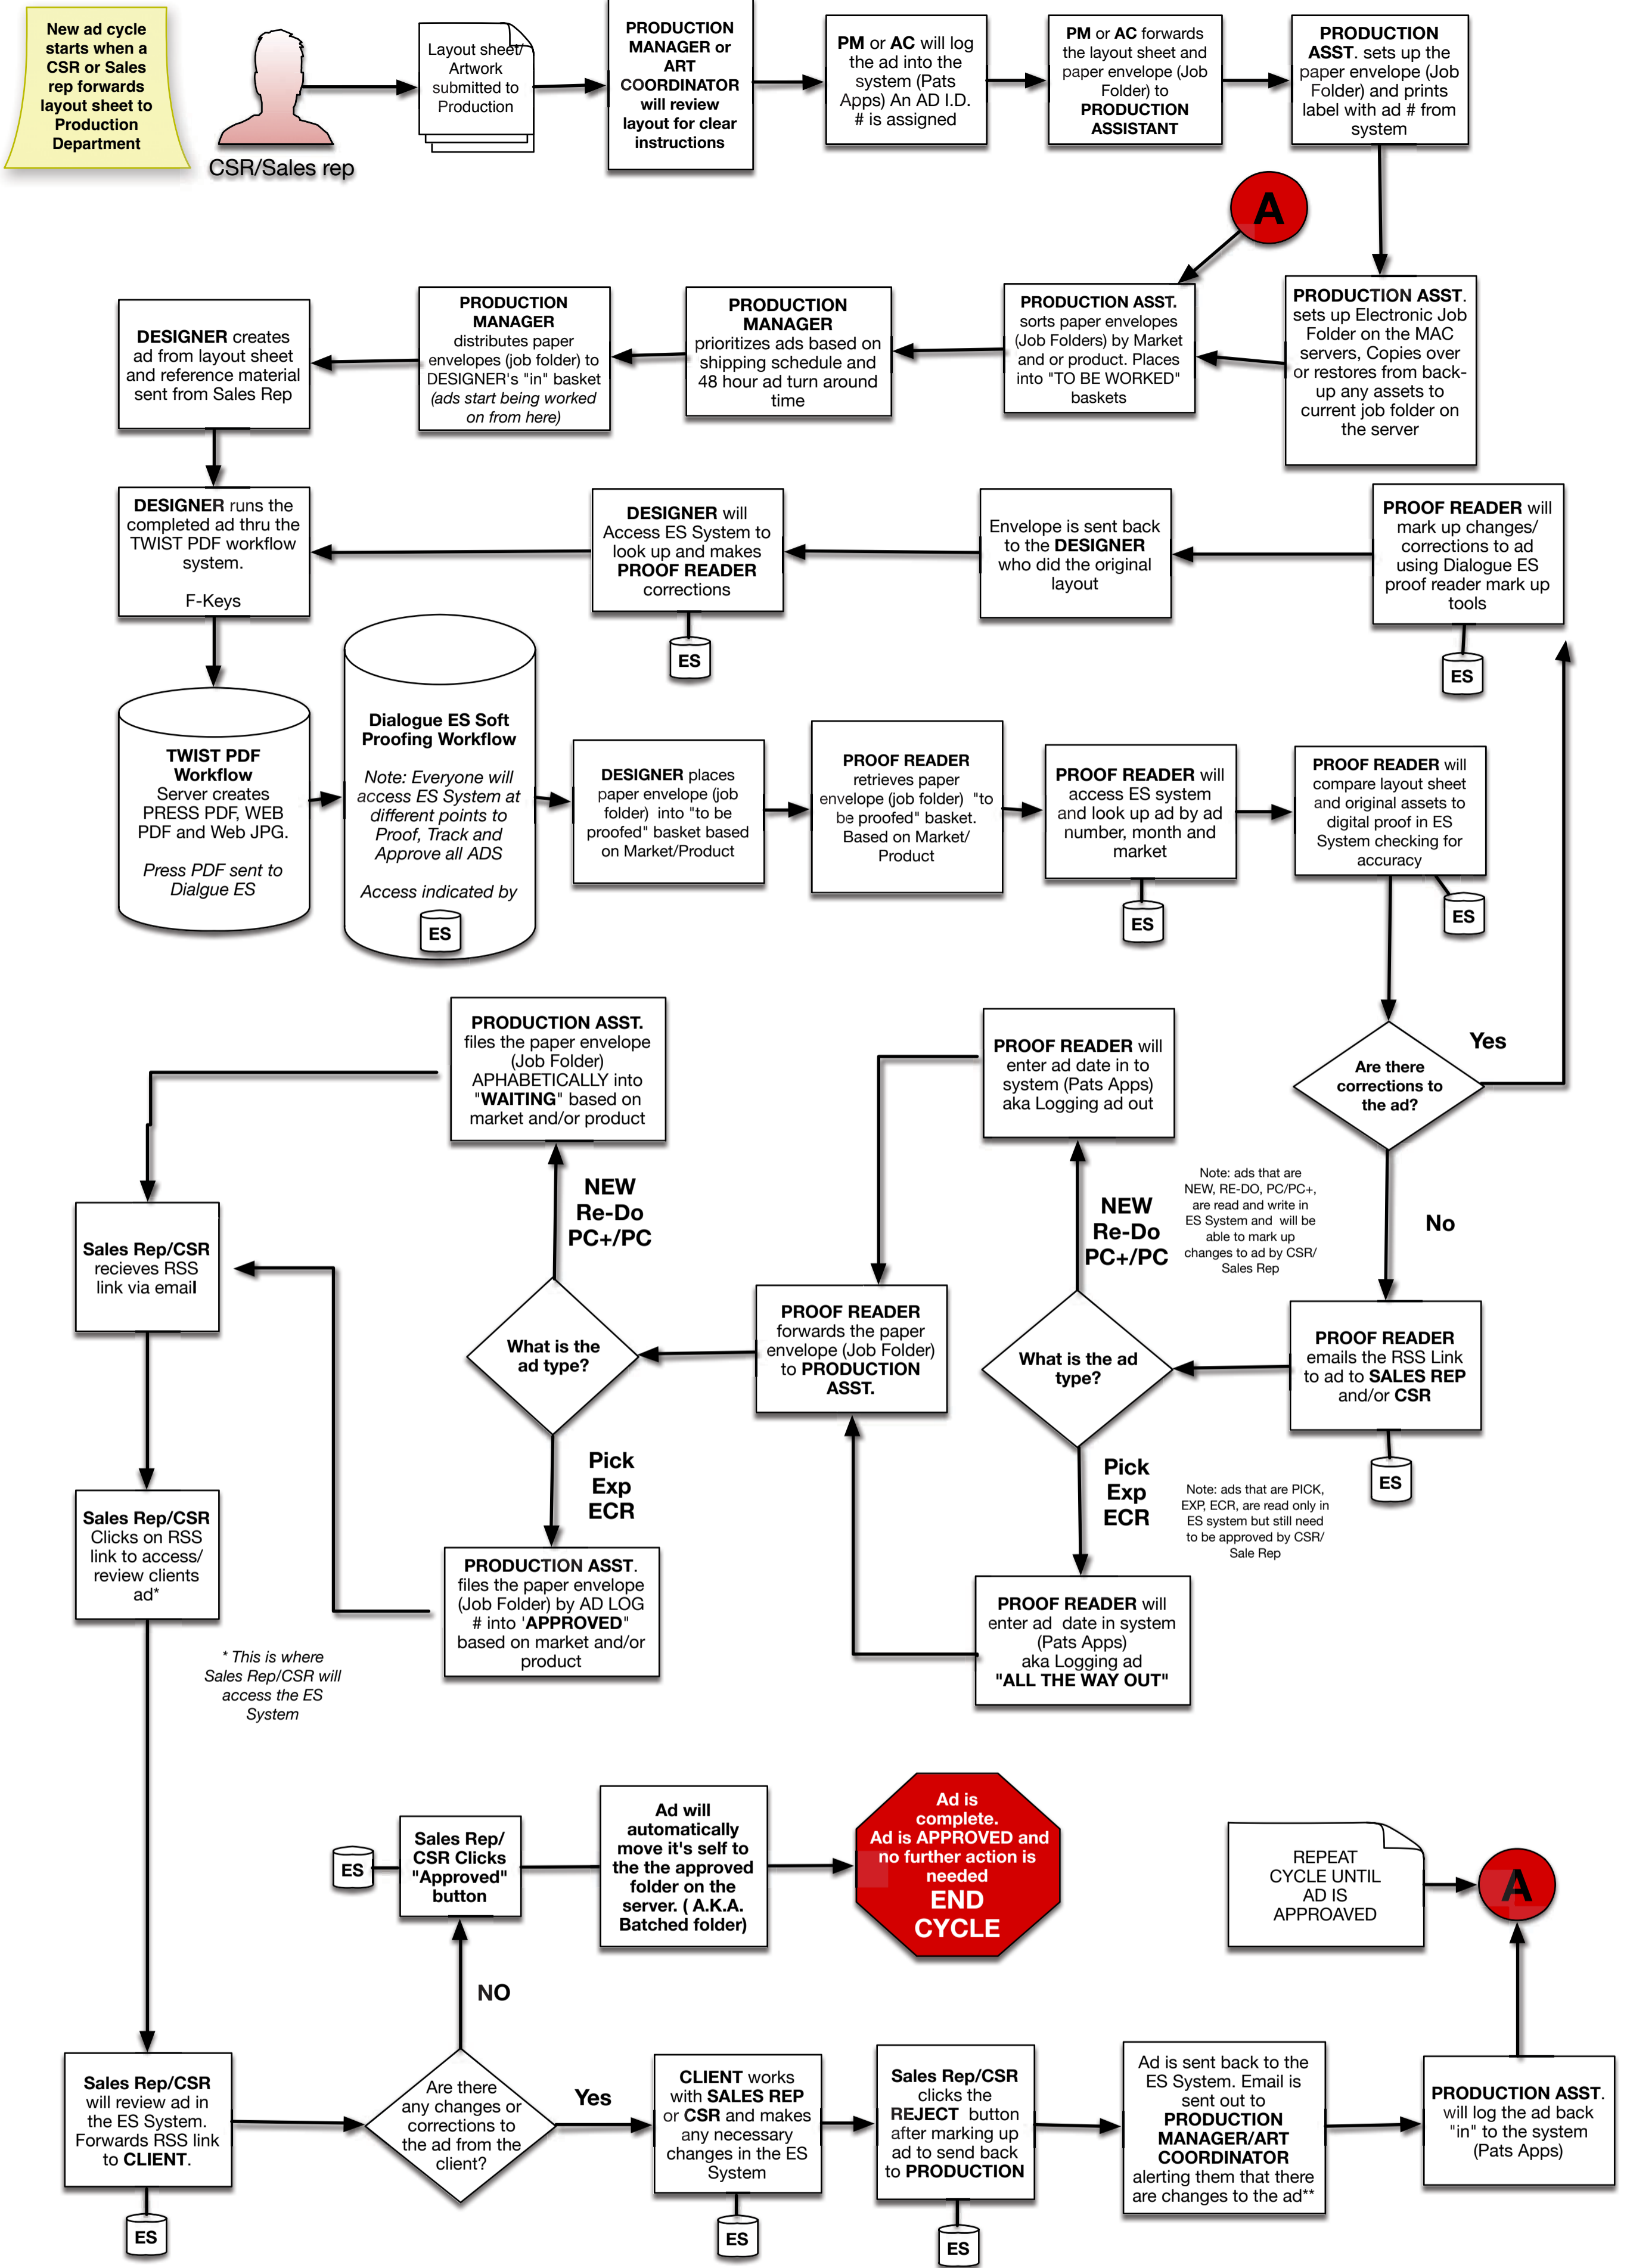

Designers - How to view corrections to an ad using the History report and resubmitting of ads

CSRs - Viewing multiple Customers, reviewing and marking up ads within the system, Approval/Rejection of ads

Sales - Viewing of THEIR projects/products, reviewing and marking up of ads. Approval/Rejection of ads. Training of Dialogue Touch App for the iPad. which will allow Sales Reps to review and mark up ads for approval or rejection from their iPads.

10) **Launch of System - Go LIVE!**

After the beta testing and training are done, we can go live starting with one market at a time. Adding markets to the system issue after issue until fully up and running and all markets/products are working in the soft proofing system.

NOTES: Once Proof Reader sends out email with RSS link to ad that needs to be reviewed to Sales Rep/CSR the Sales Rep/CSR will have 48 hours to review the ad. If the ad has not been reviewed within 48 hours the ES System will send out a second notification to the Sales Rep/CSR notifying them that the ad has not been reviewed and will extend deadline 24 hours. If the ad has not been reviewed after the second notice has been sent out (24 hours) the ES system will send out a third email notification to the Sales Rep/CSR Plus CC: Sales manager alerting all parties that the ad has not been reviewed.

Misc Notes:
 - Meta Data: What Meta Data will show up in ES? Will we be able to see meta Data- Zone Codes.
 - How are emails generated with in ES. Do we have an option to create more than one email notification message? (First Proof/Final Proofs)
 - Can ES projects be set up as ISSUES with individual ads that need to be approved?
